1D & 2D Barcodes for Business Central

Barcode Generator from Insight Works makes it possible to add linear (Code39) or 2D (Data Matrix) barcodes to reports in Microsoft Dynamics 365 Business Central.

Now you can modify existing reports such as invoices, order confirmations, and production orders to include barcodes, or you can create your own new reports with barcodes.

Both 1D Code39 and 2D Data Matrix codes are supported so integrating with existing hardware and third-party applications is seamless. Several sample reports are included that you can use as-is or create modified layouts. To add barcodes to your own reports, you will need to use the Dynamics 365 Business Central development tools to create a Dynamics 365 Business Central Extension.

Add-ons that work with Barcode Generator

Mobile Warehouse Data Collection

Inventory and warehouse managers often find themselves battling inefficient operations due to inaccurate warehouse transactions and time-consuming manual tracking. With Warehouse Insight, this is now a thing of the past. Warehouse Insight brings mobile device integration to a warehouse setting.
